I. What is Chemical Engineering?

A chemical engineer applies chemical and engineering knowledge to several fields—environmental protection, pollution prevention, biotechnology, electronics, petroleum, medicine, and law. Chemical engineers are involved in research, development (taking a process from bench scale to full scale), design and evaluation (how should the process work), plant design (how should the chemical plant be built), plant operation, sales, management, and academics.

Chemical engineers are responsible for making useful products from raw materials. They have developed the synthetic rubber used for tires, translated laboratory breakthroughs in the drug industry to large-scale, low-cost production facilities, and changed daily life with the development of plastics and synthetic fabrics. Chemical engineers in the fertilizer industry are helping in the fight against world hunger. The chemical engineer is flexible, and possesses a fundamental background and a highly developed ability to analyze and solve new problems. This training and knowledge enable the chemical engineer to enter entirely new areas of research and development with success. The chemical engineering profession is moving into several nontraditional areas that require engineers to have an even broader background in chemistry, mathematics, physics, and biology. These areas include biotechnology and biomedicine; electronic, photo optic, and recording materials and devices; and microstructured materials such as ceramics, polymers, and composites. Each of these specialties utilize chemical engineering principles and expertise to provide better health, improve the environment, develop more efficient chemical production methods, and fabricate new materials.

Every chemical engineer is an environmental engineer and a process safety engineer. Our graduates must regularly consider the safety and environmental consequences of the production and use of chemical, biological, forest and food products, and of fuels and power. Many chemical engineers work in environmental control agencies and in consulting and control firms. Interested chemical engineering undergraduates may choose to specialize in environmental engineering and satisfy their B.S. Chemical Engineering elective requirements by taking courses in environmental engineering (see the section below on Technical Electives).

Unlimited opportunities for development of interests in either scientific or applied pursuits are offered in the chemical engineering field. Chemical engineers are vital players in improving our standard of living and initiating social change. Employment opportunities for our graduates are excellent, and salaries are among the highest for B.S. engineers.

II. Welcome and General Information

It is our pleasure to welcome you to the University of Utah and to our Department. We hope that your first year will be an exciting and rewarding experience for you. This guide is designed to answer most of your questions regarding the policies and procedures of the University and the Department. We also recommend that you make an appointment with an advisor in our department so that you can plan your education and understand the requirements in Chemical Engineering. Our advisors are listed below.

Advisor	Telephone	E-mail
Tracey Farnsworth	585-7175	tracey.farnsworth@utah.edu
Geoff Silcox	581-8820	geoff@che.utah.edu

You can also find answers using the web sites listed below.

University of Utah	http://www.utah.edu
College of Engineering	http://www.coe.utah.edu
Department of Chemical Engineering	http://www.che.utah.edu

The Bachelor of Science Degree in Chemical Engineering at the University of Utah is accredited. In the 2009-2010 accreditation cycle, the Chemical Engineering Program was granted the NGR (Next General Review) Status by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite, 1050, Baltimore, MD 21202-4012; Telephone: (410) 347-7700. The ABET website is www.abet.org.

There are many opportunities for the undergraduate student to interact directly with the faculty, both inside and outside of class. The Department provides an excellent undergraduate and graduate-level education. The department's faculty have diverse research interests, are internationally known for their engineering, teaching, and scientific contributions, and many have extensive industrial experience.

Research is an important part of the department and offers the undergraduate student an opportunity to work individually with a professor on a specific engineering problem. This can be done as either a B.S. Senior Thesis or as part of the University's Undergraduate Research Program. Much of the research that is performed in the department reflects the strengths of the broader industrial and academic community in Utah. Interests include energy and fuels, environmental, engineering education, biological and biomedical engineering, multi-scale simulation, nano materials and technology, catalysis and reaction engineering, interfacial science, and process control.

The department participates in several university research centers that enable students to collaborate with other students and professors throughout campus on interdisciplinary problems.

Mission

The mission of the Department of Chemical Engineering is to cultivate an environment through teaching, research, and service that fosters the technical, critical thinking, and communication skills necessary for students and faculty to contribute to the engineering profession and to the well-being of society.

Objectives

The department and its constituencies have developed the following educational objectives. The objectives describe the career and professional accomplishments that the program is preparing graduates to achieve.

- 1) Graduates will contribute to their profession and succeed in their chosen careers.
- 2) Graduates will expand their knowledge and capabilities.
- 3) Graduates will be aware of issues that affect society and the world and will use this knowledge to strengthen their profession and contribute to the well-being of society.
- 4) Graduates will work effectively with others and practice ethical decision making.

III. Admission Policy

All students are admitted to Chemical Engineering with pre-chemical engineering status and are encouraged to meet with a departmental advisor to review program requirements and to ensure understanding of what is needed to make satisfactory progress toward degree completion. Initial meetings with an advisor often occur as part of the University's orientation program. The program requirements are summarized in the Undergraduate Student Handbook. It is available on the web (http://www.che.utah.edu/undergraduate/academic_program.php) and in hardcopy.

After completion of first- and second year courses, students can apply for **Major Status**. Major Status is required before students take their third and fourth year engineering classes.

MAJOR STATUS

A student may apply for Major status after the following courses have been completed:

CHEM 1210 and 1215 (General Chemistry I and lab)
MATH 1310 (Calculus I)
CHEM 1220 and 1225 (General Chemistry II and lab)
MATH 1320 (Calculus II)
CH EN 1703 (Intro. to Chemical Engineering) or CS 1000 or 1001
CH EN 4753 or 4755 (Undergraduate Seminar)
PHYS 2210 (Physics for Scientists and Engineers I)
WRTG 2010 (lower-division writing requirement)
CH EN 2300 (Thermodynamics)
CH EN 2450 (Numerical Methods)
CH EN 2800 (Fundamentals of Process Engineering)

Admission to Major Status requires an overall GPA of at least 2.5 in the above courses, with no individual grade below a C being accepted. The department may count AP credit for some of these courses if appropriate scores are obtained (see Section VI). Transfer students who wish to be admitted to Major Status and who did not transfer from a State of Utah institution must complete a Transfer Agreement (http://www.che.utah.edu/~geoff/transfer_agre.xls) and meet with an advisor before they can apply. The advisor must approve the transfer credit by signing the Transfer Agreement.

You may apply for Major Status online at <http://www.che.utah.edu>. Please go to the undergraduate page and select Forms.

To retain Major Status students must keep an overall cumulative GPA of at least 2.5 in their University of Utah courses. Transfer GPA is not combined with U of U GPA for this 2.5 requirement. All required courses, including those taken to satisfy technical elective requirements, must be taken for a letter-grade credit.

IV. Students with Disabilities

The University of Utah seeks to provide equal access to its programs, services and activities for people with disabilities. If you will need accommodations in the Chemical Engineering Program, reasonable prior notice needs to be given to the Center for Disability Services (CDS), <http://disability.utah.edu/>, 162 Olpin Union Building, 581-5020. CDS will work with you and your instructors to make arrangements for accommodations. All written information in your courses can be made available in alternative format with prior notification to the Center for Disability Services.

V. Degree Requirements

In order for a student to obtain a B.S. degree in Chemical Engineering at the University of Utah, he or she must satisfy both the University-wide degree requirements *and* the Departmental degree requirements. The University of Utah degree requirements are stated in the *General Catalog*. Many of these requirements are fulfilled through the departmental requirements. The departmental requirements are listed below and many of these are explained in detail in the following sections.

1. Completion of the course requirements listed under the departmental program of study below that includes the minimum number of Undergraduate Seminar courses (4) and the required technical elective credits (12).
2. The semester in which you complete CH EN 1703 sets the catalog year for the handbook that governs your graduation requirements. The catalog year for a transfer student is set by the semester in which he or she started at the University of Utah. The catalog year appears on the front cover of this Undergraduate Student Handbook.
3. A minimum of 122 semester hours is required for a bachelor's degree of which 40 must be 3000 level or above. The program of study for a B.S. degree in Chemical Engineering requires 127 semester hours with well over 40 semester hours in the 3000 level or above category.
4. Satisfactorily completing the General Education and Bachelor's Degree Requirements for the University. The University has a Lower Division Writing requirement that is normally filled by completing Writing 2010 with a grade of C- or better, and an Upper-Division Communications/Writing requirement, which is normally filled by completing CH EN 4905. The Quantitative Reasoning requirement (QA and QB) can be satisfied with Calculus. The two B.S. Quantitative Intensive classes (QI) are normally filled by completing the required Chemical Engineering and Chemistry classes. Students are responsible for fulfilling the Diversity requirement, the American Institutions requirements, the Intellectual Explorations requirements, and the International Requirement. There are four classes that will fulfill both the International Requirement and a technical elective requirement: ECON 3500, MGT 4900, MKTG 4840, and PHYS 3150.

5. Meeting the University's residency requirement: of the total hours for graduation, at least 30 must be earned in courses taken in residence at the University (correspondence courses, courses earned by exam or petition do not count). Twenty of the student's last 30 hours must be earned in residence at the University.
6. Degree candidates must have a minimum cumulative GPA of 2.5 Transfer GPA is not combined with U of U GPA for this requirement. All courses must be taken for letter grades, with the exception of Undergraduate Seminar, CH EN 4753, 4755, and other courses that are only available on a credit/no-credit basis.
7. The minimum acceptable grade in computer science, engineering, math, and computer science classes C. This policy applies to transfer credit if the transferred course is equivalent to a required course at the University of Utah. Required courses with grades below C will not be accepted toward graduation.
8. When a College of Engineering class is taken more than once, only the grade for the second attempt is counted. Grades of W, I, or V on a student's record count as having taken the class. Chemical Engineering also enforces these guidelines for mathematics and science courses.
9. In order to graduate, students must take the Fundamentals of Engineering (FE) CHEMICAL CBT Exam. The exam is administered by the State and is nationally composed and graded. This exam is given throughout the year and should be taken at the earliest possible date in the senior year or at the end of the junior year. Students who do not pass the FE exam after two attempts are permitted to petition the Chair of the Undergraduate Committee as described later in this section.
10. Transfer students are not required to complete CH EN 1705, Chemical Engineering Design & Innovation, provided they have completed the physics labs (PHYS 2215, 2225) and the organic chemistry lab (CHEM 2315). Transfer students who have not completed these labs elsewhere may take them at the University of Utah. Note that at the University of Utah, PHYS 1809 can replace PHYS 2215 and 2225. A transfer student is defined as someone who has completed 2/3 of their first-year requirements at another school.

Departmental Program of Study

The Departmental Four Year Program of Study is listed on page 8. Although some students are able to complete the necessary course work in four years, some of our students do not, primarily because of other commitments, such as family and work. We have included a Five Year Program as a guide for those students on page 10. To avoid unnecessary loss of time, the student should make sure the prerequisites indicated under course descriptions in the University General Catalog are completed prior to the time the courses are taken. Note that the minimum acceptable grade in required chemical engineering courses is C and that the minimum acceptable grade in required mathematics courses is C.

FOUR-YEAR PROGRAM IN CHEMICAL ENGINEERING 2015-2016 Catalog Year

FIRST YEAR	
FALL SEMESTER MATH 1310 or 1311 Eng Calculus I ¹ (4) CHEM 1210 General Chemistry I (4) CHEM 1215 General Chemistry Lab I (1) WRTG 2010 Intermediate Writing (3) CH EN 1703 Intro to Chem Eng (2) General Education/Bachelor Req (3) TOTAL HOURS: 17	SPRING SEMESTER MATH 1320 or 1321 Eng Calculus II ¹ (4) CHEM 1220 General Chemistry II ² (4) CHEM 1225 General Chemistry Lab II (1) PHYS 2210 Phycs For Scien & Eng I (4) CH EN 1705 ChemE Design & Innov ³ (3) CH EN 4755 Undergraduate Seminar (0.5) TOTAL HOURS: 16.5
SECOND YEAR	
FALL SEMESTER MATH 2250 Diff Equ & Lin Algebra (4) PHYS 2220 Phycs For Scien & Eng II (4) CH EN 2300 Thermodynamics I (2) CH EN 2450 Numerical Methods (2) CH EN 4753 Undergraduate Seminar (0.5) General Education (3) TOTAL HOURS: 15.5	SPRING SEMESTER MATH 3140 Vector Calc and PDE's (4) ME EN 1300 Statics and Strengths (4) CH EN 2800 Fund. of Process Eng (3) CHEM 2310 Organic Chemistry I ⁴ (4) General Education/Bachelor Req (3) TOTAL HOURS: 18
THIRD YEAR	
FALL SEMESTER CHEM 3060 Quantum Chem (4) CH EN 3353 Fluid Mechanics (3) CH EN 3453 Heat Transfer (3) CH EN 3853 Chemical Eng Thermo (3) CH EN 4753 Undergraduate Seminar (0.5) Technical Elective ⁵ (3) TOTAL HOURS: 16.5	SPRING SEMESTER CH EN 3253 Chemical Process Safety (3) CH EN 3603 Mass Transfer Separations (3) CH EN 3553 Chemical Reaction Eng (3) CH EN 5103 Biochemical Engineering (3) General Education/Bachelor Req (3) TOTAL HOURS: 15
FOURTH YEAR	
FALL SEMESTER CH EN 4903 Projects Laboratory I (4) CH EN 4253 Process Design I (3) CH EN 4203 Process Control (3) CH EN 4753 Undergraduate Seminar (0.5) Technical Elective (3) General Education/Bachelor Req (3) TOTAL HOURS: 16.5	SPRING SEMESTER CH EN 4905 Projects Laboratory II ⁶ (3) CH EN 5253 Process Design II (3) Technical Elective (6) TOTAL HOURS: 12
GRAND TOTAL HOURS: 127	

1. Qualified students may wish to take the MATH 1311 and 1321, Accelerated Eng Calc series, in place of MATH 1310 and 1320.
2. Qualified students may wish to take CHEM 1221, Honors Gen Chem II and CHEM 1241, Honors Gen Chem Lab II, instead of CHEM 1220, Gen Chem II, and CHEM 1225, Gen Chem Lab II.
3. CH EN 1705 is a required course. Transfer students are encouraged to complete 1705. If they do not, they are required to replace it with PHYS 1809 (Elementary General Physics Laboratory) and CHEM 2315 (Organic Chemistry Lab I). Note that PHYS 1809 can be replaced by PHYS 2215 and 2225 (Physics Laboratory for Scientists and Engineers I & II). A transfer student is defined as someone who has completed 2/3 or more of their first-year

requirements at another school. If 1705 is replaced by physics and chemistry labs as described above, those labs may not be used as technical electives.

4. Students who qualify may wish to take CHEM 2311, Honors Organic Chemistry I, instead of CHEM 2310.

5. A total of 12 credit hours of technical elective courses are required.

6. CH EN 4905 fulfills the Upper-Division Writing/Communication requirement.

FIVE-YEAR PROGRAM IN CHEMICAL ENGINEERING 2015-2016 Catalog Year

FIRST YEAR	
FALL SEMESTER MATH 1310 or 1311 Eng Calculus I ¹ (4) CHEM 1210 General Chemistry I (4) CHEM 1215 General Chemistry Lab I (1) WRTG 2010 Intermediate Writing (3) CH EN 1703 Intro to Chem Eng (2) TOTAL HOURS: 14	SPRING SEMESTER MATH 1320 or 1321 Eng Calculus II ¹ (4) CHEM 1220 General Chemistry II ² (4) CHEM 1225 General Chemistry Lab II (1) PHYS 2210 Physcs For Scien & Eng I (4) CH EN 1705 ChemE Design & Innov ³ (3) CH EN 4755 Undergraduate Seminar (0.5) TOTAL HOURS: 16.5
SECOND YEAR	
FALL SEMESTER MATH 2250 Diff Equ & Lin Algebra (4) PHYS 2220 Physcs For Scien & Eng II (4) CH EN 2450 Numerical Methods (2) CH EN 2300 Thermodynamics I (2) TOTAL HOURS: 12	SPRING SEMESTER ME EN 1300 Statics and Strength of Matls (4) CH EN 2800 Fund. of Process Engineering (3) CHEM 2310 Organic Chemistry I ⁴ (4) CH EN 4755 Undergraduate Seminar (0.5) General Education/Bachelor Req (3) TOTAL HOURS: 14.5
THIRD YEAR	
FALL SEMESTER MATH 3140 Vector Calc and PDE's (4) CH EN 3353 Fluid Mechanics (3) CH EN 3853 Chemical Eng Thermo (3) General Education/Bachelor Req (3) TOTAL HOURS: 13	SPRING SEMESTER CHEM 3060 Quantum Chem (4) General Education/Bachelor Req (6) TOTAL HOURS: 10⁶
FOURTH YEAR	
FALL SEMESTER CH EN 3453 Heat Transfer (3) Technical Elective ⁵ (6) CH EN 4753 Undergraduate Seminar (0.5) General Education/Bachelor Req (3) TOTAL HOURS: 12.5	SPRING SEMESTER CH EN 3253 Chemical Process Safety (3) CH EN 3553 Chemical Reaction Eng (3) CH EN 3603 Mass Transfer & Separations (3) CH EN 5103 Biochemical Engineering (3) TOTAL HOURS: 12
FIFTH YEAR	
FALL SEMESTER CH EN 4903 Projects Laboratory I (4) CH EN 4203 Process Control (3) CH EN 4253 Process Design I (3) CH EN 4753 Undergraduate Seminar (0.5) Technical Elective ⁵ (3) TOTAL HOURS: 13.5	SPRING SEMESTER CH EN 4905 Projects Laboratory II ⁷ (3) CH EN 5253 Process Design II (3) Technical Elective ⁵ (3) TOTAL HOURS: 9⁶
GRAND TOTAL HOURS:127	

1. Students with adequate math preparation may wish to take the MATH 1311 and 1321, Accelerated Engineering Calculus series, in place of MATH 1310 and 1320.

2. Students who qualify may wish to take CHEM 1221, Honors General Chemistry II and CHEM 1241, Honors General Chemistry Lab II, instead of CHEM 1220, General Chemistry II, and CHEM 1225, General Chem Lab II.

3. CH EN 1705 is a required course that was first offered spring semester 2013. Transfer students are encouraged to complete 1705. If they do not, they are required to replace it with PHYS 1809 (Elementary General Physics Laboratory) and CHEM 2315 (Organic Chemistry Lab I). Note that PHYS 1809 can be replaced by PHYS 2215 and 2225 (Physics Laboratory for Scientists and Engineers I & II). A transfer student is defined as someone who has completed 2/3 of their first-year requirements at another school. If 1705 is replaced by physics and chemistry labs as described above, those labs may not be used as technical electives.
4. Students who qualify may wish to take CHEM 2311, Honors Organic Chemistry I, instead of CHEM 2310.
5. A total of 12 credit hours of technical elective courses are required.
6. Note that a student must take at least 12 credit hours to be considered a full-time student, a requirement for scholarship recipients. You may have to take an additional course to bring your total credit hours up to 12 for this semester.
7. CH EN 4905 fulfills the Upper-division Writing/Communication requirement.

Some factors to be considered in planning your course work are

- Table 1 lists the prerequisite for required classes. The Department's policy on prerequisites is given on p. 26 of this guide.
- Chemistry 1220 and CH EN 2300 are prerequisites to Chemical Engineering 2800.
- Upper- and lower-division chemical engineering courses are offered only once each year and are restricted to students who have met the prerequisites.

Undergraduate Seminar

All chemical engineering candidates must take at least 2.0 credit hours of undergraduate seminar (CH EN 4753, 4755 - 0.5 credit hours each) during their tenure. This seminar course, which is offered every semester for 0.5 credit hours, meets once a week and is designed to discuss topics in chemical engineering. It is organized by the instructor and by the Student Chapter of AIChE and provides useful information about the chemical engineering profession, employment opportunities, and student organizations. The Student Chapter organizes tours of local industries.

Table 1. Prerequisites for Course Required by the Chemical Engineering Department.

Year / Semester	Course (Department, Number, Title)	Prerequisites	Coreq	Minimum Grade in Prereq
Year 1/Fall	MATH 1310 Eng Calculus I	MATH 1050, 1060		C
Year 1/Fall	CHEM 1210 Gen Chem I	MATH 1050		C
Year 1/Fall	CHEM 1215 Gen Chem Lab I		CHEM 1210	C
Year 1/Fall	CH EN 1703 Intro Chemical Eng		MATH 1310, CHEM 1210	C
Year 1/Spring	MATH 1320 Eng Calculus II	MATH 1310		C
Year 1/Spring	CHEM 1220 Gen Chem II	CHEM 1210		C
Year 1/Spring	CHEM 1225 Gen Chem Lab II	CHEM 1215	CHEM 1220	C
Year 1/Spring	PHYS 2210 Physics for Sci & Eng I	MATH 1310		C
Year 1/Spring	CH EN 1705 Des and Innov in ChemE	MATH 1310, CH EN 1703		C
Year 2/Fall	MATH 2250 Diff Eq and LA	MATH 1320		C
Year 2/Fall	PHYS 2220 Physics for Sci & Eng II	MATH 1320, PHYS 2210		C
Year 2/Fall	CH EN 2300 Thermo I	PHYS 2210, MATH 1320		C
Year 2/Fall	CH EN 2450 Num Methods	CH EN 1703	MATH 2250	C
Year 2/Spring	MATH 3140 Vect Calc and PDEs	MATH 2250, 1320		C
Year 2/Spring	ME EN 1300 Statics / Strength of Materials	MATH 1310, PHYS 2210		C
Year 2/Spring	CH EN 2800 Fund of Process Eng	CHEM 1220, CH EN 2300		C
Year 2/Spring	CHEM 2310 Organic Chem I	CHEM 1220		C
Year 3/Fall	CHEM 3060 Quantum Chem	CHEM 1220, PHYS 2220, MATH 2250		C
Year 3/Fall	CH EN 3353 Fluid Mechanics	MATH 2250, PHYS 2220, Major status in ChemE		C
Year 3/Fall	CH EN 3453 Heat Transfer	MATH 2250, Major status in ChemE		C
Year 3/Fall	CH EN 3853 Chemical Eng Thermo	MATH 2250, Major status in ChemE	CHEM 3060	C
Year 3/Spring	CH EN 3253 Chem Process Safety	CH EN 3353, 3453, 3853	CH EN 3553, 3603	C
Year 3/Spring	CH EN 3603 Mass Transfer and Sep	CH EN 3353, 3453, 3853		C
Year 3/Spring	CH EN 3553 Chem Reaction Eng	CH EN 3353, 3453, 3853		C
Year 3/Spring	CH EN 5103 Biochem Eng		CH EN 3553, 3603	C
Year 4/Fall	CH EN 4903 Projects Lab I	CH EN 3603, 3553, 5103	CH EN 4203	C
Year 4/Fall	CH EN 4253 Process Design I	CH EN 3603, 3553		C
Year 4/Fall	CH EN 4203 Process Control	CH EN 3603, 3553		C
Year 4/Spring	CH EN 4905 Projects Lab II	CH EN 4903		C
Year 4/Spring	CH EN 5253 Process Design II	CH EN 4253, 4903		C

Emphasis in Energy Engineering

Three of the major challenges facing humanity are limitations in the supplies of food, water, and energy. The emphasis in energy engineering is meant to give undergraduates in Chemical Engineering a suite of technical electives that will equip them with the engineering and professional skills required to address the need for clean and secure energy. Environmental protection, energy use, and energy production are included in the emphasis. The emphasis will appear on students' transcripts.

The emphasis requires 12 units and this requirement fits within the current requirement of 12 hours of technical electives in Chemical Engineering. The core electives are listed below. Students will complete 6 units from these four courses.

Core Classes for Emphasis in Energy Engineering (6 units required)		
Course	Title	Units
CH EN 5151	Combustion Engineering	3
CH EN 5153	Fundamentals of Combustion	3
CH EN 5305	Air Pollution Control Engineering	3
CH EN 5307	Green Engineering	3
CH EN 5310	Renewable Energy	3

Students will complete 6 units of supporting courses that provide a broad overview of energy related topics including climate change, sustainability, geology, and statistics. The supporting courses also include nuclear engineering and the design of thermal systems for power plants. Please note the prerequisites and co-requisites that are included below.

Supporting Classes for Emphasis in Energy Engineering (6 units required)			
Course	Title	Units	Prerequisites and Comments
ATMOS 5400	The Climate System	3	MATH 1050
ECE 2210	Electrical and Computer Engineering for Non-majors	3	PHYS 2210 with MATH 2250 as a co-requisite
ECE 3600	Introduction to Electric Power Engineering	3	ECE 2210
GEO 5220	Seismology II: Exploration and Engineering Seismology	3	Recommended: GEO 5210 and 5320
GEO 5240	Physical Fields II: Electrical Methods	3	Recommended: MATH 3150 and PHYCS 2220
GEO 5370	Contaminant Partitioning for Scientists & Engineers	3	CHEM 1210, 1220
GEO 5390	Solute Transport and Subsurface Remediation	3	GEO 3080, 3090, 3400, 5350, 5360, 5370, 5385, 5500 or instructor's consent.
GEO 5690	Aqueous Geochemistry for Engineers & Scientists	3	CHEM 1210, 1220
GEO 5760	Stratigraphy and Sedimentary Processes	4	GEO 3090. Recommended: GEO 3060.
GEO 5920	Special Topics in Fundamentals of Applied Earth Science	1.5	Instructor's consent.
MATH 3070	Applied Statistics	4	MATH 1311 or 1320
MATH 5600	Survey of Numerical Methods	4	MATH 1321 and 2250
ME EN 5800	Sustainable Energy Engineering	3	CH EN 2300, 3453, instructor's consent
ME EN 5810	Thermal Systems Design	3	CH EN 2300, 3453, instructor's consent
NUCL 3000	Nuclear Principles in Engineering and Science	3	PHYS 2220, CHEM 1220, MATH 1320
NUCL 4000	Nuclear Engineering and Science Using the TRIGA	3	NUCL 3000, 3100
NUCL 5100	Reactor Physics	3	NUCL 3000, 3100
PHYS 3150	Energy and Sustainability: A Global Perspective	3	Fulfills IR. MATH 1310, PHYS 2210

Technical Electives

Bachelor's degree candidates must complete 12 hours of approved technical electives. At least six of the 12 hours must be upper division chemical engineering classes (CH EN) or approved upper division nuclear engineering classes (NUCL). Table 2 lists the approved classes for technical electives in Chemical Engineering and Nuclear Engineering. Table 3 lists approved courses in other majors. **Although not required, students may choose to take most of their electives in one specialty.** Approved courses, listed by specialty, are given in Table 4. A brief description of the various specialties is given in Table 5. A student needs to petition the faculty, through the Undergraduate Committee (contact the Chair, Geoff Silcox), if she or he wants to use a course not listed in Tables 2 and 3 as a technical elective. Students are responsible for completing any prerequisites or co-requisites for technical elective classes.

Students who are interested in biochemical engineering and living systems are allowed to petition the Undergraduate Committee (contact the Chair, Geoff Silcox) for an exception to the above policy. The petition process allows up to 3 of the required CH EN hours to be replaced by other approved electives.

Table 2. Approved classes for technical electives in CH EN and NUCL Classes *

Course	Title	Hours	Prerequisite(s)
CH EN 4973	Undergraduate Thesis	1 - 3	Instructor's consent
CH EN 4975	Chemical Engineering Clinic	1 - 3	
CH EN 4977**	Co-op	1 - 3	Instructor's consent Up to 3 hours as upper division CH EN
CH EN 4980	Undergraduate Research	3	Instructor's consent
CH EN 4999	Honors Thesis	3	Instructor's consent
CH EN 5151	Combustion Engineering	3	CH EN 3353 and 3453
CH EN 5153	Fundamentals of Combustion	3	Instructor's consent
CH EN 5203	State Space Methods	3	CH EN 4203
CH EN 5305	Air Pollution Control Engineering	3	Major status
CH EN 5307	Green Engineering	3	Instructor's consent
CH EN 5310	Renewable Energy	3	Instructor's consent
CH EN 5810	Nanoscience	3	CHEM 1210 and 1220; PHYS 2210 and 2220
CH EN 5950	Independent Study	1 - 5	Instructor's consent
CH EN 5960	Special Topics	3	Instructor's consent
NUCL 3000***	Nuclear Principles in Engineering & Science	3	Calculus I & II, first year chemistry and physics
NUCL 3100	Introduction to Neutron-Based Engineering	3	NUCL 3000
NUCL 3200	Radiochemistry with Laboratory I	3	First year chemistry and physics courses
NUCL 4000	Nuclear Engineering & Science Using TRIGA	3	NUCL 3000, 3100

*Students who are interested in biochemical engineering and living systems are allowed to petition the Undergraduate Committee (contact the Chair, Geoff Silcox) for an exception to this policy. The petition process allows up to 3 of the required 6 CH EN hours to be replaced by other approved electives in the biochemical or living systems areas.

**Students who register for CH EN 4977 can receive up to 3 units of chemical engineering elective credit. Students who register for CH EN 4978 can receive up to 3 units of non-departmental elective credit. The total credit hours awarded to 4977 and 4978 cannot exceed 6 units.

***A minor in Nuclear Engineering is available. See <http://www.nuclear.utah.edu/minor.html>.

Table 3. Approved Non-CH EN and NUCL Technical Electives

Course	Title	Semester Hours	Prerequisite(s)
ATMOS 5000	Introduction to Atmospheric Science	3	MATH 1220 and PHYS 2210
BIOL 2020	Principles of Cell Biology	3	BIOL 1210 and 2010, CHEM 1210
BIOL 2030	Genetics	3	BIOL 2020
BIOL 3510	Biological Chem I	3	BIOL 2020 and 2030, CHEM 2320
BIOL 3520	Biological Chem II	3	BIOL 3510 or CHEM 3510
BIOL 5495	Biophysical Ecology	4	BIOL 2010, CHEM 1220, MATH 1220, PHYS 2210
CHEM 2315	Organic Chemistry Laboratory I	2	Co-requisite CHEM 2310
CHEM 2320	Organic Chemistry II	4	CHEM 2310 <i>May take CHEM 2320 or 2321, not both</i>
CHEM 2321	Honors Organic Chemistry II	4	CHEM 2311 <i>May take CHEM 2320 or 2321, not both</i>
CHEM 2325	Organic Chemistry Laboratory II	1	Co-requisite CHEM 2320 or 2321
CHEM 3070	Thermodynamics and Chemical Kinetics	4	MATH 2210, PHYS 2220 and CHEM 1220 or 1221
CHEM 3090	Physical Chemistry for Life Sciences	4	MATH 2210 and PHYS 2220 and CHEM 1220 or 1221
CHEM 3100	Inorganic Chemistry	5	CHEM 1220
CHEM 5720	Adv. Physical Chemistry Lab	2	CHEM 3060
CHEM 5730	Adv. Inorganic Chemistry Lab	2	
CH EN 4978*	Co-op	1 – 3	Instructors consent <i>Up to 3 hours as non-ChE elective*</i>

* Students may take one of POL S 5322 or CMP 5350, not both.

Table 5. Specializations for Technical Electives.

Applied Math and Physical Sciences:

The Applied Mathematics and Physical Sciences option is intended to provide students with deep understanding in fundamental sciences; mathematics, physics, chemistry and biology. Students intending to pursue graduate school options may want to consider courses in mathematics to buildup their applied mathematics background. Students wanting to go to medical school may want to consider additional courses in biology and biological chemistry. Students wanting to complete the science and math series required of them in the basic curriculum may also choose this area.

Biochemical Engineering and Living Systems:

With recent developments in biotechnology and genetics, it is apparent that chemical engineers will be needed in the future to design and develop systems that will produce biochemical/biomedical products more efficiently and economically. The objective of this emphasis area is to give the student an opportunity to learn more about biological systems and how chemical engineering principles are applied in biotechnology. Applications range from the biomedical field to bioprocessing to bioremediation. The required course, CH EN 5103, gives the student an introduction to biochemical engineering. The Projects Labs, 4903 and 4905, include projects where the student will perform biological and biochemical experiments. Biology 2020 is strongly recommended to provide background on cell structure and other biological basics and is a prerequisite to CH EN 5103.

Environmental Engineering:

The courses listed for this area were selected for students with a strong interest in the environmental area. The courses are designed to give the student more, in depth, information on the wide-range of environmental subjects. Topics covered include environmental aspects of fuels, air pollution, bioremediation, groundwater flow as well as introductory courses in environmental engineering.

Energy Engineering:

Three of the major challenges facing humanity are limitations in the supplies of food, water, and energy. The emphasis in energy engineering is meant to give undergraduates in Chemical Engineering a suite of technical electives that will equip them with the engineering and professional skills required to address the need for clean and secure energy. Environmental protection, energy use, and energy production are included in the emphasis. The emphasis will appear on students' transcripts.

Management, Policy, and Law:

Engineers frequently encounter challenges in scientific, legal, administrative, and public policy areas. The logical problem solving skills inherent in engineering lend themselves to good approaches to management, policy, and law. This option allows the student to build the skills necessary to develop and manage their own projects. Specifically, this curriculum includes course work in strategic planning, statistical quality control, and financial modeling. The suggested curriculum also includes classes that explore public policy, law, and the allocation of human resources. Engineering students who complete this option will enter their first job knowing that it takes more than just science and mathematics to complete successfully any project.

Materials and Nuclear:

The Materials and Nuclear option provides students interested in engineering and/or nuclear materials an opportunity to explore these important areas of chemical engineering. Courses expose students to the fundamentals of materials properties as well

as engineering application of materials, including metals, ceramics, polymers, electronic, and composite materials. Emphasis is placed on chemical engineering aspects of materials processing as well as materials properties and selection for applications in chemical engineering. A minor in Nuclear Engineering is available; see <http://www.nuclear.utah.edu/minor.html>.

Process Control:

Today, process engineers have software and hardware capabilities to implement multivariable model-based control, and to build accurate empirical and semi-empirical models, perform process optimization, fault detection, process monitoring, etc. The limiting factor in a wide-spread application of the advanced process control and data analysis methods is the limited set of skills obtained by chemical engineering within the traditional chemical engineering education. This emphasis area is aimed at developing a guideline on the sequence of elective classes for the students who wish to obtain a more in-depth knowledge of Process Control and related fields.

Si-chip Processing

The silicon processing industry seeks graduate who have a basic understanding of photolithography, silicon etching, thin film deposition and etching, statistical design of experiments, and solid-state physics.

Fundamentals of Engineering (FE) Exam

All chemical engineering students must take the Fundamentals of Engineering (FE) CHEMICAL CBT Exam in order to graduate. The exam is administered by the State and is nationally composed and graded. The exam is given throughout the year and should be taken at the earliest possible date in the senior year or at the end of the junior year. Information about the exam and registration can be found at <http://www.ncees.org>. The College and the Department usually conduct a “Fundamentals of Engineering Review Series” of lectures during fall and spring semesters. Recorded review lectures are available on the Chemical Engineering and College of Engineering websites.

The FE is developed and administered by the NCEES (National Council of Examiners for Engineering and Surveying). NCEES provides special testing accommodations for people with disabilities or religious convictions that preclude testing on Saturdays. More information can be found at <http://www.ncees.org>.

Students who pass the FE exam after one or two attempts must submit the report provided by NCEES, to show that they have passed the Chemical CBT Exam, to the Undergraduate Advisor before they can be cleared for graduation. Students who do not pass the FE exam after two attempts are permitted to petition the Undergraduate Committee for an exception to policy. The petition should be submitted to the Chair of the Undergraduate Committee and must include (1) relevant information to support your petition and (2) the FE exam reports you received from all prior attempts. If your supporting information includes medical records, the petition should be submitted through the Director of Disability Services.

VI. Advanced Placement (AP) Credit

Students who take Advanced Placement (AP) courses in high school may receive college credit for certain University courses if they receive a certain minimum score on the AP exam. However the department will only accept credit that appears on your University of Utah transcript showing the tests taken and the test scores. The table on page 22 outlines placement in chemistry, math, and physics as determined by those departments. For more information on placement, see the General Catalog (<http://www.ugs.utah.edu/catalog/>) pages for Chemistry, Math, and Physics. The table below assigns a grade for each score and these are used in Chemical Engineering to determine your GPA for admission to major status. If, for any reason, you decide to take a class for which you have received AP credit, we will use the grade you received in that class instead of the equivalent AP grade.

Advanced Placement Credit Information for Chemical Engineering students

Subject/AP Score	Placement as determined by relevant department	Equivalent Grade ⁴
Chemistry		
5	CHEM 2310 ¹	A/A
4	CHEM 1220	B
Calculus ^{2,3}		
5(AB)	MATH 1310 or 1311	
4(AB)	MATH 1310 or 1311	
3 (AB)	MATH 1310	No credit
5(BC)	MATH 1320 or 1321	A
4(BC)	MATH 1320 or 1321	B+
3(BC)	MATH 1320	B
Physics C Test (Mechanics)		
5	Waiving PHYS 2210 requires approval from the Physics Department	A
4		B
Physics C Test (E & M)		
5	Waiving PHYS 2220 requires approval from the Physics Department	A
4		B

1. Only the chemistry courses, CHEM 1210, 1220 are waived. Students must still take the corresponding laboratory associated with these courses, CHEM 1215 and 1225, unless they have already taken the equivalent AP chemistry laboratories in the Chemistry department at the University of Utah or elsewhere. High school lab notebooks, if examined by the undergraduate advisor in Chemistry, can be used to determine lab equivalency.
2. If you have not taken a math course recently, you may want to take MATH 15, a Precalculus Review. A strong foundation in math is necessary for many engineering courses.
3. Math 1210, 1250, 1310, 1311 or 1270 is a prerequisite to Physics 2210.

4. These grades will only be used to determine acceptance into major status in Chemical Engineering. The U grants hours of credit, not grades, for AP scores of 3 or higher. Submit a request for evaluation to the Admissions Office to have your credits recorded.

VII. Honors in Engineering Program

The Honors in Engineering Program in the College of Engineering is designed to provide a challenging, individualized educational experience to high achieving students and to promote life-long learning throughout their careers. The objective is to challenge top students by offering them access to more advanced levels of study, to facilitate the fullest possible use of their creative abilities, to encourage a sustained interest in advanced education and basic research, as well as to foster leadership and fellowship within the engineering community. Honors in Engineering is an undergraduate student honors program that is an option and not mandatory. Students can also receive Departmental Honors and/or University Honors in addition to Honors in Engineering.

For more information, including requirements and admission criteria, please refer to <http://www.coe.utah.edu>.

VIII. Transfer Students

Students planning to transfer to the department from other colleges and universities should contact the transfer student adviser, Prof. Geoff Silcox, 3290 MEB, 801-581-8820, geoff@che.utah.edu.

Transfer students who wish to be admitted to major status, and who did not graduate from a State of Utah institution, must complete a Transfer Agreement (http://www.che.utah.edu/~geoff/transfer_agre.xls) and meet with an advisor before they can apply. The advisor must approve the transfer credit by signing the Transfer Agreement. The transfer agreement is not required of students whose credit is all from a state of Utah institution.

IX. CO-OP Program

The Cooperative Education Program (Co-op) seeks to provide students with practical experience to complement class-oriented learning. The industrial exposure that participants obtain is beneficial to students who hope to work in industry. In many cases, co-op experiences will occur at locations removed from campus with a strong possibility of being out of state. These opportunities are available with employers who have agreed to participate with the University of Utah.

Participants have generally completed (or will shortly complete) their sophomore-level courses and are selected by potential employers from a pool of applicants. The process of recruitment, interviewing, and selection is typically handled by Career Services. All University of Utah students have a U Career Path account set up for them in Campus Information System. Students may post their resumes and receive information on available jobs and internships through U Career Path. For deadlines, procedures, and help with your resume, please contact Colton Griffiths (cgriffiths@sa.utah.edu, (801)581-7993) in Career Services.

Once employed in a co-op, students request admittance into CH EN 4977 or 4978. The former, 4977, may be used for up to 3 units of departmental technical elective credit. The latter, 4978, may count for up to 3 units of non-departmental technical elective credit. Students working part-time for an engineering employer during a semester may also apply for admittance to CH EN 4977 or 4978, and receive from 1 to 3 hours credit for their work experience. To receive credit, the student will be required to produce a 15-20 page report each time they register for CH EN

4977 or 4978. The report will describe the engineering activities and work performed, and must meet acceptable academic standards of grammar and detail.

Participation in some co-op Programs will alter the suggested departmental program of study. Students may alternate semesters between engineering employment and on-campus study. Co-op participants must commit to their employer and to the department, that they will fulfill their employment obligations and complete full-time study while on-campus *without outside employment*. All students return to the University campus full time for their senior-level courses.

For info on internship opportunities, make sure your U Career Path profile is updated, and contact Colton Griffiths (CGriffiths@sa.utah.edu) with any questions. For current co-op opportunities, contact Dr. Terry Ring (ring@eng.utah.edu, 801-585-5705). Co-op opportunities are also posted on the Chemical Engineering website as they arise.

If you will be missing a semester or more of classes due to co-op, please speak with Tracey Farnsworth, Academic Advisor (tracey.farnsworth@utah.edu, 585-7175) or Geoff Silcox, Associate Chair (geoff@che.utah.edu, 581-8820) before the semester begins.

X. Policy on Repeating Courses

When a College of Engineering class is taken more than once, only the grade for the second attempt is counted. Grades of W, I, or V on a student's record count as having taken the class. Chemical Engineering also enforces these guidelines for mathematics and science courses. Please contact Tracey Farnsworth or Geoff Silcox if you plan to repeat a course more than once.

XI. Departmental Scholarships

The Department has a number of scholarships that are available to undergraduate students (<http://www.che.utah.edu/>, undergraduate page, scholarships). Application forms are available on the website. The department offers many scholarships for incoming and continuing students that are available from funds raised from industry or our alumni. In addition, there are a wide variety of University scholarships that are also available to incoming Chemical Engineering students from the Financial Aid & Scholarship Office, such as the Presidential or Honors-at-Entrance scholarships. Contact the Financial Aid & Scholarship Office, 105 SSB, 581-6211, for more information and application forms. The College of Engineering has a number of scholarships that are available to Chemical Engineering students; they can be contacted at 581-6911 or <http://www.coe.utah.edu>.

A number of loans are available through the College of Engineering.

XII. LEAP and E-LEAP Programs

Engineering-LEAP (E-LEAP) is a year long, small class called a "seminar," focusing on the theme of community building in American and in global settings, and the ethical standards of engineering. This seminar keeps students together with one professor and classmates, while fulfilling the University's diversity requirement and two general education requirements—one in Humanities and one in Social Science. In the first semester, students engage in a discussion about the American community experience as revealed through American autobiography and fiction. In the second semester, students build on the first semester concepts to consider the role of the engineer as a technical expert in contributing to community decision-making. In addition

to its academic content, E-LEAP seminar emphasizes college writing, critical reading, group work, presentation skills, and library research strategies appropriate for engineering majors. Throughout the year, students network with College of Engineering faculty and advisors as well as the LEAP professor and a student advisor to learn more about careers in engineering. They also attend lectures and events about innovations in the engineering field. For more information contact the LEAP office at (801) 581-3811.

XIII. Student Organizations

While your course work should be your top priority, participating in various student organizations and activities on campus can enhance your education at the University of Utah. This will enable you to interact with your colleagues outside of class and in an informal manner as well as acquaint you with all the supporting services the University and the College has to offer. The following table lists a few of the U of U student chapters you may want to consider.

Organization	Location, Tel. Number	Contact
American Institute of Chemical Engineers (AIChE)	3290H MEB 581-4460	Prof. Ed Trujillo or Kevin Whitty
Society of Women Engineers (SWE)	1603 WEB 801-581-8954	Ms. Amanda May
Society of Hispanic Professional Engineers (SHPE)	1603 WEB 801-581-8954	Ms. Amanda May
Program for Diversity in Engineering (PDE)	1603 WEB 581-8954	Ms. Amanda May
American Indian Science and Engineering Society (AISES) -	1603 WEB 581-8954	Ms. Amanda May
Society of Ethnic Student Engineers (SESE)	1603 WEB 581-8954	Ms. Amanda May
Women in ChemE Peer Mentors Program	3290B MEB 801-585-7175	Tracey Farnsworth
K-12 Outreach Team	3226 MEB 801-587-8461	Prof. Tony Butterfield

XIV. Policy on Prerequisites

Students who do not meet the prerequisites for a course must submit a class permission code request through the Chemical Engineering website, www.che.utah.edu.

XV. Combined BS/MS Program

The Department offers a combined BS/MS degree program for undergraduate students interested in research. This program is designed to foster undergraduate research and to accelerate progress toward the Master of Science degree. Students in the combined program should begin their research while in the undergraduate portion of the program and may expect to complete the combined degree after five years with the simultaneous conferral of the Bachelor of Science and Master of Science degrees. This is one year less than a traditional sequential BS - MS program as described in the General Catalog. The BS degree portion of the combined degree requires the

completion of 124 semester credit hours. The MS degree requires the completion of 30 additional hours. The standard BS degree requires 130 hours. Because the BS and MS degrees are conferred at the same time, the BS/MS program is not open to international students since the Form I-20 does not permit two concurrent careers.

Students are encouraged to begin research in the summer following their junior year and often receive financial support. Most BS/MS students are also eligible for the University of Utah Tuition Benefit Program, once they are classified as graduate students.

The shift from undergraduate to graduate status occurs after completion of required undergraduate Chemical Engineering classes. Students wishing to exit the combined program can apply qualifying coursework toward the traditional BS and MS degree requirements without penalty. No student will be awarded a separate MS degree without satisfying all requirements for the BS degree.

SUGGESTED COMBINED BS/MS PROGRAM IN CHEMICAL ENGINEERING

FIRST YEAR

FALL SEMESTER

MATH 1310 or 1311 Calculus I¹ (4)
CHEM 1210 General Chem I (4)

CH EN 5253 Process Design II (3)
Technical Elective⁵ (7)

SUMMER SEMESTER

CH EN 6973 Thesis Research: Master's (3)⁷

CH EN 4753 UG Seminar (0.5)

Gen Ed/Bachelor Req (3)

TOTAL HOURS: 13.5

TOTAL HOURS: 13

TOTAL UNDERGRAD HOURS: 122

FIFTH YEAR

FALL SEMESTER

CH EN 6353 Fluid Mechanics (3)

CH EN 6853 Thermodynamics (3)

Technical Electives (6)⁸

CH EN 7857 Grad Seminar (0.5)

TOTAL HOURS: 12.5

SPRING SEMESTER

CH EN 6553 Chemical Reaction Eng (3)

CH EN 6603 Multicom Mass Transfer (3)

Technical Elective (3)⁸

CH EN 7859 Grad Seminar (0.5)

CH EN 6973 Thesis Research: Master's (2)

TOTAL HOURS: 11.5

SUMMER SEMESTER

CH EN 6973 Thesis Research:
Master's (3)

TOTAL GRADUATE HOURS: 30

1. Students with adequate math preparation may wish to take the MATH 1311 and 1321, Accelerated Engineering Calculus series, in place of MATH 1310 and 1320.
2. Students who qualify may wish to take CHEM 1221, Honors General Chemistry II and CHEM 1241, Honors General Chemistry Lab II, instead of CHEM 1220, General Chemistry II, and CHEM 1225, General Chem Lab II.
3. CH EN 1705 is a required course that was first offered spring semester 2013. Transfer students are encouraged to complete 1705. If they do not, they are required to replace it with PHYS 1809 (Elementary General Physics Laboratory) and CHEM 2315 (Organic Chemistry Lab I). Note that PHYS 1809 can be replaced by PHYS 2215 and 2225 (Physics Laboratory for Scientists and Engineers I & II). A transfer student is defined as someone who has completed 2/3 of their first-year requirements at another school.
4. Students who qualify may wish to take CHEM 2311, Honors Organic Chemistry I, instead of CHEM 2310.
5. A total of 7 credit hours of technical elective courses are required and at least 3 must be in approved CH EN or NUCL courses.
6. CH EN 4905 fulfills the Upper-division Writing/Communication requirement.
7. Students who are admitted to the Graduate School for the MS portion of the BS/MS are not eligible for the tuition benefit program during their first summer semester.
8. BS/MS students may take their graduate electives earlier in their program of study, if their schedule permits it.

APPLICATION / ADMISSION PROCEDURES

Undergraduate students must complete their preliminary application to the combined BS/MS program by May 1st of the year in which they are enrolled in CH EN 3603, Mass Transfer and Separations. An undergraduate GPA of at least 3.3, based on all undergraduate work or work completed during the last two years of study, whichever is higher, is required. Students must be supported by a faculty member who will be their research advisor for a master's thesis. The

faculty member must be able to support the student as a Research Assistant for the graduate portion of this program.

Applicants who do not qualify for the BS/MS program are encouraged to apply to the traditional MS program.

To begin the process for admission to the BS/MS program, submit the following three items by May 1:

1. A completed Chemical Engineering BS/MS application. This application can be found at <http://www.che.utah.edu/>. Please go to the undergraduate page and select Forms.
2. A letter of support from the faculty member who will be your research advisor for your master's thesis. The letter must include a commitment from the faculty member to support you as a Research Assistant for the graduate portion of this program.
3. A current Degree Audit Report (DARS).

Mail or deliver all materials to:

Tracey Farnsworth, Academic Advisor
University of Utah Chemical Engineering Department
50 S Central Campus Drive RM 3290 MEB
Salt Lake City, Utah 84112-9203

Once given preliminary approval, based on the above three items, the student will need to submit a BS/MS program of study, take the GRE, and complete an application for admission to the Graduate School. Students should apply to the Graduate School by 1 February. This will ensure admission for the summer semester following the semester in which the student completes Projects Lab II and Process Design II. Students must comply with Admissions Office deadlines. Seniors need to plan on taking the GRE at least a few weeks before the 1 February deadline.

Admitted students must follow all guidelines for the Masters of Science program that are listed within the Graduate Handbook.

Students who are admitted to the Graduate School for the MS portion of the BS/MS are not eligible for the tuition benefit program during their first summer semester.

XVI. Undergraduate Research Scholar Designation

The designation, Undergraduate Research Scholar (URSD), appears in the awards section of the transcripts of graduating students. The following requirements are part of the URSD. More information is available at <http://ursd.utah.edu/>.

- A student must complete two semesters of research with a faculty mentor.
- A student must participate as a presenter in a campus - wide U of U, state undergraduate research symposium, National Conference on Undergraduate Research or a professional conference.
- A student must publish their work in the U of U Undergraduate Research Abstracts journal, other campus research publication, national, regional or state conference program or proceedings or other professional journal.

Academic credit for doing research may be earned by registering for CH EN 4973 (Undergraduate Thesis), CH EN 4980 (Undergraduate Research), and CH EN 4999 (Honors Thesis). Note that 4980 can be taken twice for a total of six units.

XVII. Undergraduate Courses offered in the Department (CH EN)

A complete list of Chemical Engineering course offerings is available in the online Catalog at http://www.acs.utah.edu/GenCatalog/crsdesc/ch_en.html. As with all engineering courses, the prerequisites for each class must be completed by the time of registration. The minimum acceptable grade in required CH EN courses is C.

XVIII. Logging in Remotely to the Department Server

The Department of Chemical Engineering allows students to connect remotely to its computing labs, the ICC and the Starley Lab. For information on how to do this, please see <http://bitly.com/YYaPlf>.
