## CHEN 1703 - Homework 3

Submit your MATLAB solutions via the course web site. Be sure to include your name and UNID in your m-file. Submit each solution seperately. Also be sure to document your solutions well. Include a description of the equations you are solving.

## Problem 1 (5 pts)

Consider the projectile problem we discussed in class.

$$
\begin{aligned}
y & =y_{0}+v_{y_{0}} t+\frac{1}{2} a t^{2} \\
x & =x_{0}+v_{x_{0}} t \\
v_{x} & =v_{x_{0} \prime} \\
v_{y} & =v_{y_{0}}+a t
\end{aligned}
$$

with $v_{x}=v \cos (\theta)$ and $v_{y}=v \sin (\theta)$. The speed is given in terms of $v_{x}$ and $v_{y}$ as $v=\sqrt{v_{x}^{2}+v_{y}^{2}}$. Calculate the position and speed of a projectile. Have the user enter:

- the initial angle, $\theta$
- the initial speed, $v_{0}$
- The end time
- The number of points in time.

You must use arrays to store the values for $t, x, y, v_{x}$, and $v_{y}$.
When you run your script you should see something like the following:

```
Enter the ending time (s): 10
How many points in time? 6
Enter the initial speed (m/s): 12
Enter the angle (degrees): 64.8
Here is the position and speed as a function of time:
            t(s) x(m) y(m) v(m/s)
            0 0 0 12.0000
            2.0000 10.2187 2.1158 10.1257
            4.0000 20.4374 -34.9683 28.7989
            6.0000 30.6561-111.2525 48.2136
            8.0000 40.8748-226.7366 67.7351
    10.0000 51.0935 -381.4208 87.2917
```

>>

NOTE:

- You can use the "disp" command to do all of the output. Just pack all of the numbers into a matrix. We have covered everything you need to know in class to accomplish this.
- The cos and sin functions in MATLAB require the angle in radians. Therefore, you will need to convert the angle from degrees to radians.

## Problem 2 (5 pts)

Create a MATLAB program to convert temperature in Fahrenheit to Rankine, Celsius, and Kelvin. The following equations may be useful:

$$
\begin{aligned}
T_{{ } F} & =\frac{9}{5} T_{{ }^{\circ} \mathrm{C}}+32, \\
T_{{ }^{\circ}} & =273.15+T_{{ }^{\circ} \mathrm{C}} \\
T_{{ }^{\circ}} & =459.67+T_{{ }^{\circ} F} .
\end{aligned}
$$

The user should enter:

- The starting temperature in ${ }^{\circ} \mathrm{F}$
- The ending temperature in ${ }^{\circ} F$
- The number of entries in the table

When you run your script you should see something like the following:

```
Enter the starting temperature (F): 0
Enter the ending temperature (F): 100
Enter the number of points in the table: 10
Fahrenheit Rankine Celsius Kelvin
            0)}459.6700 -17.7778 255.372
        11.1111 470.7811 -11.6049 261.5451
        22.2222 481.8922 -5.4321 267.7179
        33.3333 493.0033 0.7407 273.8907
        44.4444 504.1144 6.9136 280.0636
        55.5556 515.2256 13.0864 286.2364
        66.6667 526.3367 19.2593 292.4093
        77.7778 537.4478 25.4321 298.5821
        88.8889}5548.5589 31.6049 304.7549 
    100.0000 559.6700 37.7778 310.9278
```

>>

NOTE: You can use the "disp" command to do all of the output. Just pack all of the numbers into a matrix. We have covered everything you need to know in class to accomplish this.

## Problem 3 (5 pts)

Repeat problem 1 using Excel. Here use 10 points in time. Have the user enter the time increment, initial speed, and initial angle. The table should adjust accordingly. Your spreadsheet may look like the following (yellow indicates numbers to be changed by the user):

| $\diamond$ | A | B | C | D | E | F |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Time Increment (s): |  | 0.33 |  | xo (m) | 0.00 |
| 2 |  |  |  |  | yo (m) | 0.00 |
| 3 | Initial speed ( $\mathrm{m} / \mathrm{s}$ ): |  | 10.00 |  | vxo ( $\mathrm{m} / \mathrm{s}$ ) | 7.07 |
| 4 | Initial angle (degrees |  | 45.00 |  | vyo ( $\mathrm{m} / \mathrm{s}$ ) | 7.07 |
| 5 |  |  |  |  | a $\left(\mathrm{m} / \mathrm{s}^{2}\right)$ | -9.80 |
| 6 |  |  |  |  |  |  |
| 7 |  |  |  |  |  |  |
| 8 | Time (s) | $\times(\mathrm{m})$ | $y$ (m) | $\mathrm{v}_{\mathrm{x}}(\mathrm{m} / \mathrm{s})$ | $\mathrm{v}_{\mathrm{y}}(\mathrm{m} / \mathrm{s})$ | $v(\mathrm{~m} / \mathrm{s})$ |
| 9 | 0.000 | 0.000 | 0.000 | 7.071 | 7.071 | 10.000 |
| 10 | 0.333 | 2.357 | 1.813 | 7.071 | 3.804 | 8.030 |
| 11 | 0.667 | 4.714 | 2.536 | 7.071 | 0.538 | 7.091 |
| 12 | 1.000 | 7.071 | 2.171 | 7.071 | -2.729 | 7.579 |
| 13 | 1.333 | 9.428 | 0.717 | 7.071 | -5.996 | 9.271 |
| 14 | 1.667 | 11.785 | -1.826 | 7.071 | -9.262 | 11.653 |
| 15 | 2.000 | 14.142 | -5.458 | 7.071 | -12.529 | 14.387 |
| 16 | 2.333 | 16.499 | -10.179 | 7.071 | -15.796 | 17.306 |
| 17 | 2.667 | 18.856 | -15.988 | 7.071 | -19.062 | 20.332 |
| 18 | 3.000 | 21.213 | -22.887 | 7.071 | -22.329 | 23.422 |

By changing the numbers in yellow, the remainder of the numbers should automatically update.
